

GJØL Marine Center finds the solution.

GjøL Marine Center has operated in the boating business for more than 20 years. They offer customers a wide range of different boating solutions for engine installation, electrical work, hydraulics, fiberglass repairs, engine refurbishment, and repairs of gears, drives and propeller shafts. The owner 'Mr Arne Nielsen', has had more than 30 years experience in the industry and now recommends the Prolan products to his customers. He has always been on the lookout for better and friendlier products to use that also have great performance.

Solution

At the 'Danfish 2012' fishing show 'Arne' met the 'Denrex' team who are the European Distributors for the Prolan range of lanolin based products. 'Niels Bilde' a well known Danish fishing guide and keen fisherman who works for Denrex, explained the versatility and benefits of these natural products.

The advantage of the Prolan liquid sprays is:

- Prolan products replace others and so reduce stockholdings of lubricants and rust inhibitors.
- Prolan is a clean, easy to use biodegradable product that is environmentally friendly.
- Prolan out-performs previous products used at the GjøL Marine Center as a corrosion inhibitor.

Results

- Prolan is used on every boat / engine at the GjøL Marine Centre today and is highly recommended to their customers.
- The Prolan sprays last longer than previously used products.
- The amount and types of lubricants and sprays that are used in the workshop have been reduced.

Testimonial

In the words of the business owner 'Arne Nielsen', "When the GjøL Marine center has serviced your boat, then you know it will work"-The Prolan products have reinforced his principles and are now recommended to their customers.
