

PROLAN EXTREME 350

ProLan Extreme is for “long term” corrosion protection with a **smooth and stable surface**

Applications

- **ProLan Extreme** is designed for superchargers for a “drier”, more stable surface.
- **Stays flexible so there is no risk of cracking, and resistant to the effects of the weather.**
- ProLan Extreme is **highly penetrating, penetrating metal to stop corrosion.**
- ProLan Extreme can be applied directly to a rusty surface for long-term protection and **prevents new rust from forming.**
- ProLan Extreme can be used both indoors and outdoors – indispensable and **effective protection against rust.**
- NSF International Food-Grade, **class H1.**
- ProLan Extreme **withstands 170-bar high-pressure cleaning**, highly wear-resistant after drying and insoluble in water.
- **Resistant to acids**, salts, salt water, fertiliser and corrosive elements in general. Unique durability.
- ProLan Extreme **does not damage** glass, enamel, leather, chrome or treated surfaces in general and has a **transparent surface.**
- ProLan Extreme can be removed from surfaces with odourless kerosene or similar.
- **UV-resistant** up to 24 months.
- **Electrically and electrolytically separating up to 70 kV**, providing optimal protection for all electrical installations in dry and damp environments.
- **ProLan Extreme 350** is specially developed for onshore/offshore wind turbines for **protection of hydraulics and stainless bolts against seizing**, and for mounting steel structures.

PROLAN EXTREME 350 is ideal for

- **Offshore fish farms – aquaculture** – underwater – bolts in general in corrosive environments to prevent rust
- **Radar systems in corrosive environments – military installations** – exposed installations – electrical plugs – fishing vessels
- **Battery poles** – offshore – ship decks – **offshore cranes – wind turbine installations** – onshore/offshore
- **Construction machinery** – salt equipment in general – **vintage cars** – undercarriage protection – **cavity treatment**
- **Garages** – landscaping machinery – agriculture – electric motors – gear – food equipment
- **Destroys rust** – gears – **pumps** – construction – stainless polishing – steel wires – corrosion protection – **steel structures**
